

Admin Technical Manual

Satyam Polymats Field Sales App

Version 1.0 | June 2026 | Confidential

App URL	https://sales.satyamgroup.info
GitHub Repo	https://github.com/Nakulchandak/field-sales
GitHub Username	Nakulchandak
Domain	sales.satyamgroup.info (via Google Domains CNAME)
Admin PIN	3375 (change by updating index.html)
Hosting	GitHub Pages — Free forever
Data Storage	Browser localStorage on each phone — no server database
Tech Stack	Single HTML file — no backend, no framework
Last Updated	June 2026

1. Admin Dashboard

Admin logs in with PIN 3375 and lands directly on the Dashboard.

Feature	What It Does
Filter: All Activity	Shows combined data — all sales reps + admin quotations
Filter: Sales Reps Only	Shows only field reps' activity — excludes Head Office entries
Rep-wise Summary Cards	One card per rep showing quotes created, visits done, total quote value
Stats Grid	Total quotations, visits, customers, and total quote value (in ■K)
■ Export Visits CSV	Downloads all visit/check-in data as CSV for record keeping
■ Import Price List	Upload Tally Excel → app updates product list for all reps instantly
Quotations Tab	View, edit, or delete any quotation created by any rep
Customers Tab	Edit customer master — changes reflect across all their quotations and visits
Visits Tab	View, edit, or delete any check-in record

2. Price List — Import from Tally

When prices change in Tally, update the app in under 2 minutes:

Step 1	In Tally Prime → export your stock/price list as Excel (.xlsx)
Step 2	Ensure columns are in order: Col A = Product Name, Col B = Packing, Col C = Unit (Nos/Sqft), Col D = Pre-G
Step 3	Login to app as Head Office → Dashboard

Step 4	Tap ■ Import Price List (Excel) → select the Tally Excel file
Step 5	App reads all items → green success message shows item count
Step 6	Price list and product dropdown update instantly for all reps
Step 7	Prices persist in app until next import — no need to repeat unless prices change

Excel format: same as your existing Item_list.xlsx from Tally. No changes needed to the file.

Units: "Nos" = standard packing (bundles). "Sqft" = rolls priced per square foot. App handles both automatically.

3. Updating the App (New Features / Bug Fixes)

When you receive an updated index.html file:

Step 1	Go to github.com/Nakulchandak/field-sales and login
Step 2	Click on index.html in the file list
Step 3	Click the pencil = ■ icon (Edit this file) — top right of file view
Step 4	Click ... → Upload file → select the new index.html
Step 5	Scroll down → click Commit changes
Step 6	Wait 2-3 minutes → GitHub rebuilds the site automatically
Step 7	All phones get the update next time they open the app — no reinstall needed

■ All sales rep data (visits, quotations, customers) is stored on their phone — it is NOT affected by GitHub updates. Their data remains completely safe after every update.

4. Data Management & Backup

Where data lives:

Data is stored in browser localStorage on each phone. It is tied to the URL sales.satyamgroup.info on that specific browser. No server or cloud backup exists in the current version.

Scenario	Data Lost?	Prevention
GitHub update (new features)	No — safe	Nothing needed
Clear browser history	No — safe	History ≠ data
Clear cookies/site data	YES — permanent	NEVER do this on work browser
Phone factory reset	YES — permanent	Export CSV before reset
Change/lost phone	YES — permanent	Export CSV before switching
Change browser app	YES — permanent	Stay on same browser

Weekly Backup Routine (Recommended):

Step 1	Login as Head Office → Dashboard
Step 2	Tap ■ Export Visits CSV
Step 3	CSV downloads with all visit details, customer info, GPS, notes
Step 4	Save to Google Drive or your computer
Step 5	This is your permanent backup — keep at least last 4 weeks

5. Adding a New Sales Rep

Step 1	Open index.html → find the login button section (search for "Sales Executive")
Step 2	Add a new button: copy the existing Sales Executive button block
Step 3	Change the name to the new rep's name (e.g. "Rajesh Kumar")
Step 4	Upload new index.html to GitHub
Step 5	New rep opens sales.satyamgroup.info → their name appears → they tap to login
Step 6	To add them to isSalesRep tracking — no change needed, it's automatic by name
Step 7	To add them as an admin — add their name to adminNames array in isSalesRep() function

Each rep sees only their own quotations in History. Admin sees all reps combined or filtered individually.

6. Changing the Admin PIN

Step 1	Open index.html in a text editor (Notepad, TextEdit, VS Code)
Step 2	Press Ctrl+F (Find) → search for: 3375
Step 3	You will find two places: checkAdminPin() function — change both to new PIN
Step 4	Save the file → upload to GitHub as index.html
Step 5	New PIN active within 2-3 minutes

PIN can be any number — 4 to 6 digits recommended.

7. Technical Architecture

Component	Technology	Location	Purpose
App file	HTML/CSS/JS	GitHub repo	Entire app in one file
Hosting	GitHub Pages	nakulchandak.github.io	Serves the HTML file
Domain	Google Domains CNAME	sales.satyamgroup.info	Custom URL pointing to GitHub
HTTPS	GitHub Pages SSL	Automatic	Secure connection + GPS/camera access
Data	Browser localStorage	Each phone	Visits, quotes, customers stored locally
Price list	localStorage + import	Each phone	Updated via admin Excel import
PDF generation	Blob URL + print	In browser	No server needed
Excel parsing	SheetJS CDN	Online library	Reads Tally Excel format
WhatsApp share	Web Share API + print	Browser API	Android native, iOS via print

8. Future Roadmap — Phase 2

When team grows to 3+ reps, these upgrades are recommended:

Priority	Feature	Benefit
High	Cloud database (Firebase/Google Sheets)	Data syncs across phones — no local storage risk
High	Real-time admin view	See rep activity live without waiting for CSV export
Medium	Photo storage (Google Drive)	Shop/visiting card photos backed up automatically
Medium	Multiple admin users	Different Head Office staff with own logins
Medium	Follow-up reminders	Rep gets notified to follow up with customer
Low	Tally direct sync	Quotations flow directly into Tally as Sales Orders

Low	Route planning map	Show all visited customers on a map for planning
Low	Inventory check	Rep sees live stock before quoting

All Phase 2 features can be built on top of the existing app without starting over. The current architecture is designed to scale.

9. Key Code Reference (for Developer)

What to change	Search for in index.html	Notes
Admin PIN	'3375'	Change in checkAdminPin() — appears twice
Add sales rep	"Sales Executive"	Copy login button block, change name
Add admin user	'Head Office'	Add name to adminNames array in isSalesRep()
Company name	Satyam Polymats Pvt Ltd	Multiple places in renderPreview + sharePriceListPDF
Bank details	HDFC0000826	In renderPreview function
GST rate	gstAmt = afterDisc * 0.05	Change 0.05 for different GST %
HSN code	46019900	In terms & conditions section
Quote number prefix	'PF/'	In generateQuotation() function
Product list	const PRODUCTS = [	Hardcoded defaults — override via Admin import

10. Emergency Procedures

If sales rep loses all data:

Step 1	Check if Admin had exported CSV recently → recover from there
Step 2	Data on phone is gone permanently if CSV was not exported
Step 3	Lesson: Export CSV weekly to prevent future loss

If app stops loading at sales.satyamgroup.info:

Step 1	Try the direct GitHub URL: https://nakulchandak.github.io/field-sales/
Step 2	Check github.com/Nakulchandak/field-sales → Settings → Pages — should say "Your site is live"
Step 3	Check Google Domains → DNS → CNAME record for "sales" pointing to nakulchandak.github.io
Step 4	If GitHub Pages is unpublished — re-enable: Settings → Pages → Deploy from branch → main → Save

If WhatsApp sharing stops working:

Step 1	iPhone: Use Print → Save to Files → open WhatsApp → attach manually
Step 2	Android: Use Share button inside browser → select WhatsApp
Step 3	Both: Screenshot the quotation as temporary workaround and send via WhatsApp
